

**WARD**

# Meticulous with Metals

Recycling & Management

Ward is the largest independent metal recycler in the Midlands. We offer a specialist metal recycling service, designed to meet the ever-changing needs of all our customers.

We provide a simple scrap metal solution to help you maximise your recycling whilst minimising your waste management costs.

As a specialist buyer of works arising metals, we buy all grades of ferrous and non-ferrous metals. This includes heavy engineering grade carbon steel, through to lighter grade mild steels, punchings and various non-ferrous grade such as copper and aluminium drink cans. All of our materials are processed for delivery into UK end users or for export.

**Ward is committed to being at the forefront of metal recycling in the UK.**

## Recycling & Management

### Metals

Ward offers one of the most comprehensive metal recycling solutions in the UK. We can recycle all types of ferrous and non-ferrous metals, including all types of steel and aluminium, drinks cans, copper wire (including armoured cabling), lead and lead acid batteries, punch waste and all types of vehicles.

We also offer the option of linking your scrap prices to those listed on various platforms. This offers you the safeguard of being able to constantly monitor prices/value of your scrap at any time. Our integrity is of paramount importance to us. All materials are weighed on our own fully calibrated electronic public weigh bridges.

### Why choose metal recycling?

- Increase your business efficiency. Our team manages every aspect of the process.
- Maximise your business revenue from all of your waste materials.
- Enhance your business' environmental performance through recycling.
- Reduce your carbon footprint, minimise environmental impact and improve overall resource efficiency.

**Not sure if your metal waste is suitable for bulk recycling?**

### Metal recycling - straightforward solutions for business.

We offer competitive pricing, excellent customer service and an extensive range of collections options. Our collection containers start from 5 cubic yard skips up to 40 cubic yard roll on/roll off skips. For larger collections, we also offer nationwide articulated collections.

95%

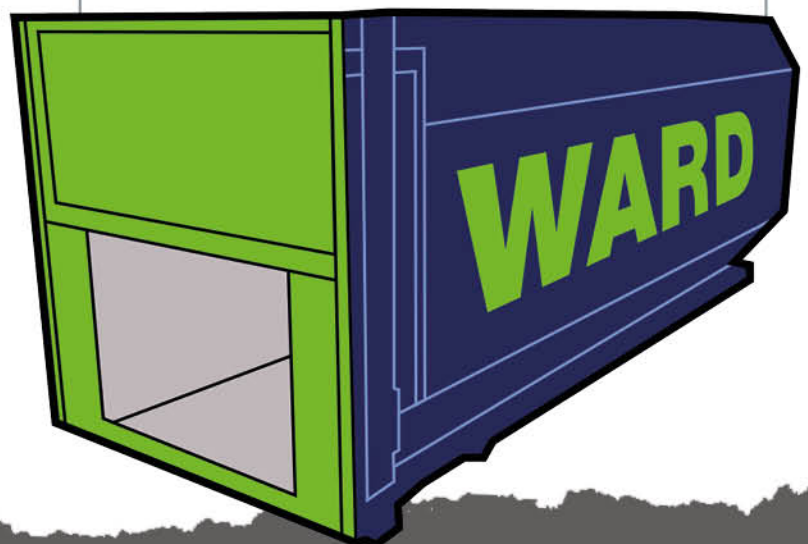

Recycling aluminium uses 95% less energy than producing aluminium from raw materials.

100%

Steel is 100% recyclable into anything from cars to steel cans. It can be recycled over and over again.

80%

Globally, around 80% of all lead is used in the manufacture of acid batteries. All of this is recoverable and recyclable.
